COVID-19 FAQs Quarantine

Q: What is quarantine?

A: Quarantine is used to keep someone *who might have been exposed to COVID-19* away from others. Quarantine helps prevent spread of disease that can occur before a person knows they are sick or if they are infected with the virus without feeling symptoms. People in quarantine should stay home, separate themselves from others, monitor their health, and follow directions from their state or local health department.

Q: Who needs to quarantine?

A: Anyone who has been in close contact with someone who has COVID-19 should quarantine.

Q: What counts as close contact?

A: You have had close contact if:

- You were within 6 feet of someone who has COVID-19 for at least 15 minutes.
- You provided care at home to someone who is sick with COVID-19.
- You had direct physical contact with the person (touched, hugged, or kissed them).
- You shared eating or drinking utensils.
- They sneezed, coughed, or somehow got respiratory droplets on you.

Q: What do I need to do if I am in quarantine?

A: You should:

- Stay home for 14 days after your last contact with a person who has COVID-19.
- Watch for fever (100.4 degrees F or higher), cough, shortness of breath, or <u>other symptoms</u> of COVID-19. If possible, stay away others, especially people who are at <u>higher risk</u> for getting very sick from COVID-19.
- Follow directions from your local health department.

Q: When should I start and end quarantine?

A: You should stay home for 14 days after your last contact with a person who has COVID-19.

Q: What if I get a negative test showing I don't have COVID-19?

A: Even if you test negative for COVID-19 or feel healthy, you should stay home (quarantine), since symptoms may appear two to 14 days after exposure to the virus. It could take days before the infection shows up on a lab test.

Q: What if I ended up having a repeat close contact with the person who is sick during my quarantine? What if I have contact with someone else sick with COVID-19? Do I need to restart my quarantine?

A: Yes. You will have to restart your quarantine from the last day you had close contact with anyone who has COVID-19.

Q: What if I live with someone who has COVID-19 and cannot avoid continued close contact?

A: You should avoid contact with others outside the home while the person is sick, and quarantine for 14 days after the person who has COVID-19 meets the <u>criteria to end home isolation</u>.
