

# WHEN CAN I BE AROUND OTHERS AGAIN?

## You can be around others after:

- 10 days have passed since the start of your symptoms
- 1 day (24 hours) has passed since your last fever (without the use of fever reducing medications); **AND**
- Other symptoms have improved.

**If you have a severe or critical illness or are immunocompromised**, you may be subject to extended isolation periods. This could be up to 20 days after your symptoms started or your test date. If you feel this applies to you, please contact your doctor for further guidance on how long you are to be isolated. **If you are a healthcare worker**, you may be subject to different criteria for release. You should contact your infectious disease control professional at your place of work for guidance.
