

World AIDS Day takes place on December 1st. Started in 1988, World AIDS Day is an opportunity for people to come together to show support for people living with HIV and celebrate those who have died from an AIDS-related illness. Acquired immunodeficiency syndrome (AIDS) is a chronic condition caused by the human immunodeficiency virus (HIV). By damaging your immune

Y

system, HIV interferes with your body's ability to fight against infection and disease. Approximately 1.2 million people in the U.S. are currently living with HIV. The disproportionate impact of HIV infection on racial and ethnic minorities has affected communities already struggling with many social and economic challenges like poverty, homelessness, and unequal access to the health care system. Black people account for a higher proportion of new portion of HIV diagnoses and people with HIV, compared to other races and ethnicities. In fact, in 2019, Black individuals were 8.1 times more likely to be diagnosed with HIV infection, as compared to the white individuals and represented almost 13% of the U.S.'s reported HIV cases. There's no cure for HIV/AIDS, but medications can control the infection and prevent progression of the disease. Antiviral treatments for HIV have reduced AIDS deaths around the world. Diagnosing HIV quickly and linking people to treatment immediately are crucial to achieving further reduction in new HIV infections. The CDC recommends that all individuals between the ages of 13 to 64 get tested for HIV at least once as part of routine health care and that those with risk factors get tested more frequently. The earlier it's diagnosed, the earlier you can start treatment and avoid becoming seriously ill.

International Day of People with Disability

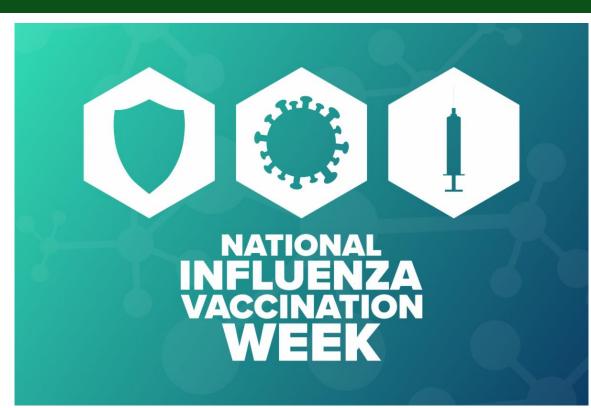

International Day of Persons with Disabilities is an international day of observance that takes place on December 3 every year since 1992. On this day, the goal is to promote an understanding of disability issues and mobilize support for the dignity, rights and well-being of persons with disabilities. The observance of this day also seeks to increase awareness of gains to be derived from the integration of persons with disabilities in every aspect of political, social, economic and cultural life. Each year the day focuses on a different issue, with this year's theme being "Transformative solutions for inclusive development: the role of innovation in fueling an accessible and equitable world." Roughly 26% of the world's population has some kind of disability according to the Center for Disease Control (CDC) with the highest rates of disability seen in the South. Disability is especially common in older adults, women, and minorities. Native Americans have the highest disability rate among working-age adults, followed by blacks, whites, Hispanics, and Asians. Despite the disabled community being the largest minority group globally,

there is little representation in the media.

How can you raise awareness in your community?

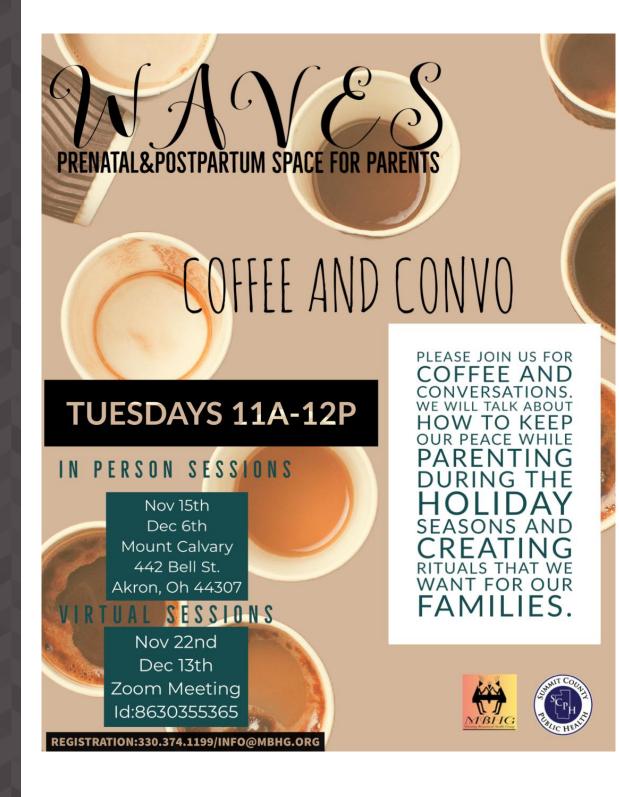

- 1. Host a training session/screen documentary to provide education to those around you
- 2. Learn how to recognize and celebrate neurodiversity
- 3. Work to improve accessibility and inclusion for all

National Influenza Vaccination Week

National Influenza Vaccination Week (NIVW) is observed December 5th-9th to remind everyone to get vaccinated against flu. Vaccination is particularly important for people who are at higher risk of developing serious flu complications, like young children 6 months and up. It's also important because there are known racial and ethnic minority groups that have higher rates of flu onset and hospitalization. According to the CDC, flu hospitalizations rates are 80% higher among black adults, 30% higher among American Indian/Alaska Native (AI/AN) adults, and 20% higher among Hispanic adults compared to white adults. While vaccination does not guarantee prevention from infection, it does help to reduce the severity of symptoms and the decrease the risk of hospitalization. Flu vaccination coverage has been consistently lower among Black, Hispanic, and AI/AN adults. In fact, according to the CDC, during the 2021–2022 season, flu vaccination coverage was only at 54% among White adults, 42% among Black adults, 38% among Hispanic adults, and 41% among AI/AN adults. Lack of access to health care and insurance, the spread of misinformation and a history of distrust, and racism and prejudice are just a few know factors that create inequities in vaccination rates. Since flu viruses are constantly changing and protection from vaccination decreases over time, getting a flu vaccine every year is the best way to prevent flu. Flu vaccines are the only vaccines that protect against flu and are proven to reduce the risk of flu illness, hospitalization, and death.

Local Events

McDonald's FREE Naloxone Pop Up

Local McDonald's restaurants are teaming up with Summit County Public Health to help combat the opioid crisis by providing FREE naloxone to the community at seven distribution events around Summit County.

Had a baby in 2020 or 2021?

You could get up to \$5,000 in federal money for your baby. **(\$3600 with the Child Tax Credit plus a \$1400 stimulus payment)**

Getting this money <u>does not</u> impact your immigration status or the status of people you live with.

- ⊘ You could also get other payments for yourself and any other children you have.
- You can get this money even if you have never done taxes before or if you have not in the last few years.
- This money does not count for most benefits, like SNAP, WIC, TANF, MEDICAID,
 CHIP, SSI, Emergency Assistance shelter, and most types of public and subsidized housing.
- ✓ If you didn't get the 2020 stimulus payments for a baby born in 2020 (\$500 for the first payment and \$600 for the second), you can get these by filing a late or amended 2020 tax return.

Get your money now! Scan the QR Code or go to <u>www.getCTC.org/NEOH</u>

FREE COVID Home Test Kits
